

For my page, I wanted to accomplish something that was fun and bubbly to match the vibes of the cakes! To do this, I needed to find some fun fonts and a nice color scheme that compliments the cakes in the images I used! First, I'll start with colors. I went for a color scheme that was drawn from some of the images. I chose a light green color for the overall background of the content. I also chose a background image for outside of the main content container that's slightly textured and an off-white color to add a subtle change in texture! I chose to outline the green box with a light pink line to separate the green from the textured background and make the content area very clear! For some other colors, I chose a blue-ish purple color for just a few accents around, a darker green to layer on top of the light green and use in small accents as well, and a darker pink for a hover feature and a few text areas. I also used white throughout the page because it fits really nicely with the bright and fun color scheme!

In terms of typography, I wanted something that was a bit fun and bubbly without being too intense and hard to read. I found a really nice font I liked for the main header of the page and found secondary and tertiary fonts that complimented it! I used the secondary font for some other subheadings throughout the page. This font is just the right level of fun without being too distracting and doesn't take away from the main heading font. The tertiary font which I used for any big bodies of text is just a simple, more rounded font to match with the bubbly sort of vibes without being distracting at all.

In terms of other CSS features, I wanted to group together all of the forms in an organized fashion for the "surveys" section of my page, so I put a uniform background behind the section to make it stand out and appear as one cohesive area. I also used features like just a top border to make dashed lines which help indicate that the video and list are part of one cohesive section! I also used a hover feature for the table because I think it's a super cool feature and I love to incorporate it into the tables!
